- Establish and maintain Development Project Plan from Definition and Architecture phase to Acceptance phase with the customer
- Manage efficient Project Reporting and Monitor/Control KPIs such as project schedule, budget, ...
- Establish Project Reporting for internal and external reviews
- Animate the R&D team in charge of delivering the project
- Interact with customer on day to day projects follow-up
- Present Project Reporting to customer on a regular basis

Education

- Engineer or Master Degree in electronics and/or computer science

Main knowledge

- Good understanding of Transport Optical technologies, including DWDM and OTN
- Good understanding of Hardware Development Cycles
- Good understanding of Software Development Cycles and Agile methodology (Scrum or Kanban)
- Used to work with Project Management Tools
- Good knowledge of Microsoft powerpoint, excel, word

Experience

5 years minimum, in R&D on Transport telecom products (HW/SW), including project management

Particular abilities

- You are used to work in a telecom environment
- You are autonomous and self-learning
- You are continuously looking for improvement
- You are a leader and a problem solver
